

ABSTRACT OF THE DISCLOSURE**"A System and Method for Improving the Effectiveness of Web Advertising"**

5

A system and method for improving the effectiveness of web advertising by allowing a user to return and request a previously displayed ad that appeals to the user. Generally, the system employs an intelligent browser cache maintained within a user's terminal to keep web pages in cache and maintain information about hyperlinks contained therein. Furthermore, the system allows for 10 the storing of ads in a bookmark memory without clicking on the ads. The bookmark memory is either permanently maintained or temporarily stored for a predetermined time period at the user's terminal to allow the user view all the stored ads at a later time. The system further includes an algorithm for computing the differences between previously visited pages stored in the intelligent browser cache and a new page in terms of their hyperlinks. Presented to the user in separate windows are all the ads from both the old and new pages to aid the user in deciding whether to click and visit a different page or to save the displayed page for later use. Finally, the system permits the user to request for ads previously displayed at a particular position by pointing his mouse to the current ad at such a location.
